

Forestry Conservation & Habitat Project

April 23, 2011 - 8:30 am - 2:00 pm

In cooperation with:

BOY SCOUTS OF AMERICA

Forest areas are vital to the natural environment and to the quality of life of every citizen. Preventing rapid soil erosion, filtering harsh chemicals and providing habitat for wildlife are some of the benefits of trees and forests. Habitat is the most important factor influencing grouse populations. Grouse reach their highest densities in young forests - the brushy stages of growth called early-successional habitat.

Schedule / Activities

- 8:30 Meet at DCNR District Office, Laughlintown
 - Team Assignments
- 9:15 Drive to Worksite, Quick Site Tour
- 9:30 Work Begins
 - Plant 500 tree seedlings
