

RGS GROUSE TRAIL MIX

- **Starfire Red Clover**
- **Hunt Club™ Brand White Clover**
- **Plot Enhancer™ Brand Chicory**
- **Alsike Clover**
- **Jumbo II Ladino Clover**
- **Crimson Clover**

RGS Grouse Trail Mix is a combination of both perennial legumes and chicory formulated to produce high protein content all season long. RGS Grouse Trail Mix is formulated to tolerate poorer soils. Plot Enhancer™ Brand Chicory will provide continuous feed in the summer when the legumes are either producing seed heads and are less palatable or during the droughtier times due to its tap root system.

A lush plot of Grouse Trail Mix planted in northern Wisconsin. Grouse and many other species will benefit throughout the year. (Photo by Gary Zimmer, RGS Regional Biologist)

RGS Grouse Trail Mix can be seeded in the Spring or Fall, or Frost Seeded. For optimum growth, persistence, and maturity soils should have a pH of 5.8 or higher and nutrient levels should be adjusted to soil tests results.

Sow RGS Grouse Trail Mix at 12 pound per acre.
